

Title

Program to convert number to word

Background Context

Daily we often get phone bill, electrical bill, ... we can see total amount we must pay, this amount always display in word.

Program Specifications

Create a program to convert numeric string to word in English. For example: 100 -> One hundred.

Function details:

1. Enter a string in numeric format
2. Convert the string in numeric format to word in English
3. Display to the screen the converted string.
4. The program continues to do another reverse task if user press Y/y, exit is press N/n.

Expectation of User interface:

The Program must have interface as below:

Please enter string in numeric format: 100

The converted string: One Hundred

Do you want to continue? (Y/N) n
